

University of Mississippi Medical Center
Procedure – Installation of printers remotely
8-9-2008

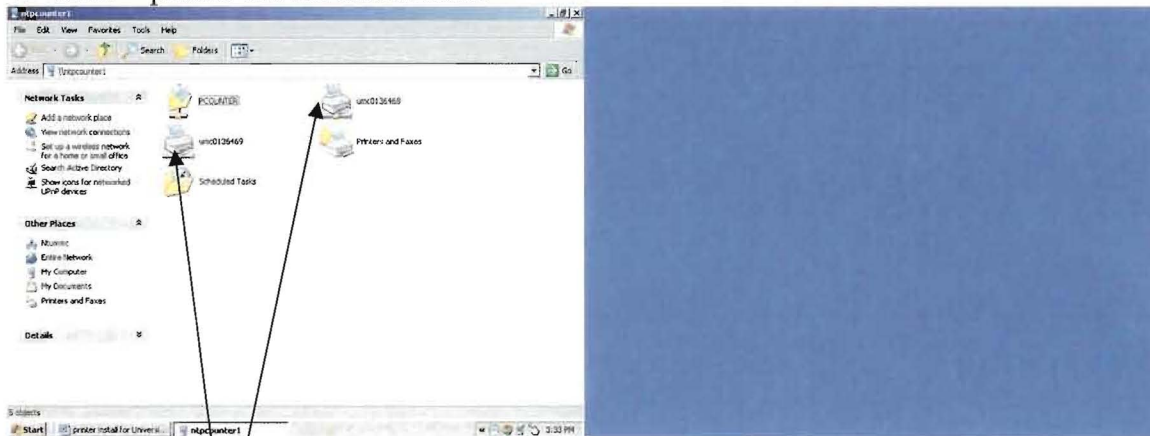

Procedure: how to install a “PCounter” Printer on your p.c. (either wireless or wired)
The procedure is very simple. It is all based on VPN to the Network.

1. Wireless installation – a. load VPN Client supplied by UMMC for access to its Network. If wired to the system and are have logged-in normally you do not have to VPN into the network then go to no. 3
2. Login into the network with a name and password.
3. go to “RUN” enter

Type in \\ntpcounter1

4. enter – printer should install itself

5. A list of printers will come up.
6. **Umc0137469** – This is the printer in the Library
Umc0137468 - This is the printer in the Classroom CW197-2 (in lobby area)

Please note that are printer are under re-construction due to age of equipment and new being added even as we speak. Also note that the UMC No. (Property control no.) is the only way you can readily tell what printer you are downloading. This will be more important as we continue our conversion to Microsoft.
